

THE IMMUNITY WARS

A cooperative game where real immunology is how you win

Entry routes on the LEFT · organs on the RIGHT, head to toe · one board serves every difficulty

ENTRY ROUTES — where germs break in

THE ORGANS — what you must defend

ANTIBODY SUPPLY

One cube per class. Antibodies are SPECIFIC — one class never helps against another.

ENV	0	1	2	3	4	5	6
NAK	0	1	2	3	4	5	6
EXB	0	1	2	3	4	5	6
ICB	0	1	2	3	4	5	6
TOX	0	1	2	3	4	5	6
EUK	0	1	2	3	4	5	6
X	0	1	2	3	4	5	6

THE INVADERS

Nine ways a germ behaves. Each disease card names its antigen class and target organ. Circles under an organ = its integrity. The organ box is the final position: a germ reaching it attacks. Blue dashed arcs (LYMPH) = lymphatic shortcuts: Nose-Contact-Gut share one, Wound-Bite share another. Blood has none.

Virus marches to an organ	Hidden virus hides inside your cell	Bacteria DIVIDES each turn
Toxin not alive - antibody only	Venom antivenom only	Fungus tough - 2 hits
Worm too big to eat - 3 hits	Malaria liver to blood lifecycle	Parasite complex cell - 2 hits

THE TURN

1 · INFECTION

draw a disease card · place it at its entry route

2 · COMMAND

spend Action Points: move, produce, attack, vaccinate

3 · SPREAD

every germ advances one step · bacteria divide

TURN

				5					10					15					20					25					30					35					40					45
